

COMPLETE LINE OF EQUIPMENT

MITUSA manufactures a complete line of Longitudinal Seam Welding systems, Planishers and Manipulators. In addition, we offer a variety of support equipment such as system controls and material handling to automate the usage of our equipment.

Seamers: Some key features

- Handle cylinders or plate, thin to thick
- Weldable metals from 3 inch to 40 ft in length
- Material handling for loading and unloading
- Linear side beam track and carriage systems

Planishing: Some key features

- Systems to flatten or cold work the weld bead.
- Gantry and Tabletop designs
- Small and large diameter mandrel
- Removable mandrel for variety of planishing parts

MITUSALATOR-Manipulator: Some key features

- Patent pending design allows the boom to be rotated in line with the column for easy set up in a changing weld cell.
- No assembly necessary
- Easy rotation avoiding wire entanglement
- Easily integrated to other auxiliary equipment like turning rolls or positioners.

On MITUSA weld systems, we offer several control versions—from fully automated **DTS (Digital Touch Screen)** control with minimum operator intervention, to a **New SPC (Standard Positioning Control)** where the operator has specific engagement throughout the process.
