

DUAL TORCH SLIDE

MITUSA designed and manufactured and innovate Dual Torch Slide assembly which allows outfitting of a Manipulator with 2 weld systems. This is especially useful when performing a MIG or TIG root pass in preparation for Sub Arc filler pass.

This slide can also be outfitted with an Oscillator. The Oscillation is programmable with distance, speed, a dwell time. This Oscillated the complete slide therefore if required, the Sub Arc pass can also be oscillated.

A complete line of Manipulators systems is available at MITUSA. In addition, we offer a variety of support equipment such as system controls and material handling to automate the usage of our equipment.
